

# INSTRUCTIONS TO RUN THE HTML FILE

The code consists of two files, namely:

- 1) **DataStory.html**: The file that displays the Visualizations and supporting text.
- 2) **style.css**: The external stylesheet to style the *DataStory.html*.

Instructions to execute the code:

- 1) Place both *DataStory.html* and *style.css* into one directory before executing.
- 2) Open the *DataStory.html* file in *Google Chrome* Web Browser set to a default zoomed view of **100%**.

Note: For the best view above instructions should be followed. Opening in different Browsers may render a different view (spaces, alignments of elements) because of some Browser-specific styles applied.(e.g- Mozilla's webkit specific style and so on).
